

Mini Project Report – Scratch Game: “Cat vs Beetle (3-Mode Game)”

1. Project Title

Cat vs Beetle – 3 Mode Interactive Game

2. Introduction

This Scratch project is a simple interactive game where the player controls the cat using the SPACE key. The project also contains three different modes, each changing how the sprite behaves. This game demonstrates event handling, movement, mode selection, and basic animation.

3. Objective

To learn how keyboard events work in Scratch

To move a sprite using the SPACE key

To understand how to create multiple modes in a game

To use variables and conditions for mode selection

4. Game Instructions

Press the Green Flag to start.

Choose one of the three modes:

Mode 1: Normal movement

Mode 2: Fast movement

Mode 3: Special animation/movement

Press SPACE to make the cat move forward or perform the mode-based action.

5. Game Description

The game contains a cat sprite and a beetle sprite. Depending on the mode selected:

Mode 1 – Normal Mode

The cat moves slowly when SPACE is pressed. Good for beginners.

Mode 2 – Speed Mode

The cat moves faster, giving a more challenging gameplay.

Mode 3 – Special Mode

The cat may jump, change costume, glide, or move differently.

6. Code Description (Simple Explanation)

Mode Selection:

A variable such as “Mode” is used.

Movement Using SPACE:

If Mode = 1 → move 10 steps

If Mode = 2 → move 20 steps

If Mode = 3 → special movement

7. Features

Clean, simple controls

Three different play styles

Keyboard-based interaction

Sprite movement and animation

Beginner-friendly code structure

8. Conclusion

This Scratch project successfully teaches the basics of user interaction, modes, and sprite control. The 3-mode structure makes the game creative and more interactive. It is an excellent beginner project demonstrating good understanding of Scratch programming concepts.
